

## **An Introduction to the World of Code**

The infinix club of our STME was successful in enlightening the young minds of NMIMS by hosting a crucial and interactive session for first- and second-year students.

The session focussed on the domain of coding and other tech relevant skills. The presentation began with a spectacular demonstration of a drone which required coding for its functioning. The session was interactive and interesting as volunteers were called upon to perform simple programs and show their knowledge about coding. The infinix club focuses at setting up building blocks of people who are interested in coding and want to pursue their skills into greater heights. It aims to setting up foundation stones that lasts for a longer time and are put into use in everyday problem solving.

A DIY game made using simple codes was also showed during the session. The following presentation was based on the basics of coding for first time coders. The event ended in great enthusiasm and the students keenly wait for another session as this time they were given small projects to work on. Thus, keeping students occupied, the infinix club will soon be back with another amazing session.
