INFINIX CODE CONNOISSEUR

Infinix, the coding club of NMIMS, Navi Mumbai organized a coding competition on the 21st of September, 2019.The event showed an active participation from STME, with students showing their skills in coding.

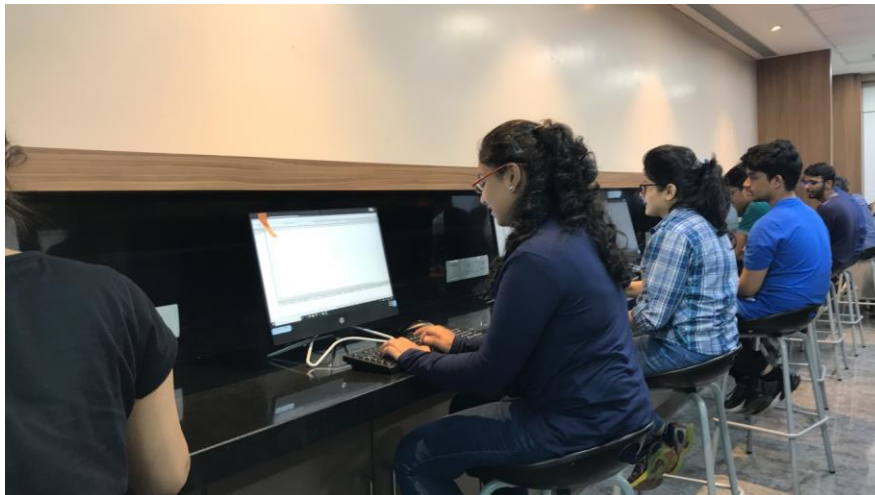

The participants were asked to code three different problem set in three different rounds with certain time limits for every question given. The time limit was a factor where the winners were decided. The fastest one who codes the snippet correctly wins it all!

Brushing up coding skills is considered as one of the fundamental steps in shaping the minds of beginners in the humongous world of computers. With the rise in the demand of skilled professionals, NMIMS understands the importance of the need of a foundation for its students

to be equally potential in logical analysis as of the students of any leading institute in the country while solving daily life problems through chunks of codes. Events like code connoisseur inculcate coding skills in a fun but also in a competitive way, where the students have the opportunity to self- assessment their coding skills and understand their speed and make greater improvements in the future.

The competition had a tough fight with around ninety students competing but at the end the most skilled and fastest coders, Shaurya Verma, Aarjav Hansoti and Rupali Vastani won the competition.
